VIRTUAL INTERNSHIP · EDUSKILLS

Python Fullstack Developer Virtual Internship

EduSkills

Presented by Manmeet Singh

B.Tech CSE (AI & ML), IILM University, Greater Noida

Duration: August–October 2026 · Academic year: 2026–27

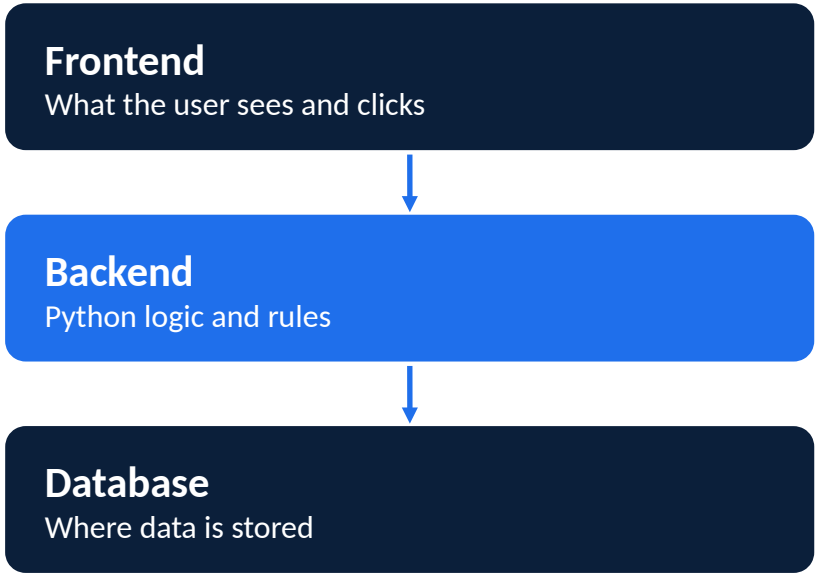

Internship Overview

VERIFIED · CERTIFICATE

Verified from certificate

- 8-week Python Fullstack Developer Virtual Internship
- Supported by EduSkills Academy
- Period: August–October 2026
- Grade shown on certificate: O (Outstanding)
- Virtual internship = remote, online programme

How full-stack fits together (general)

Training Objectives

GENERAL CONCEPT

Common objectives of Python full-stack training, not personal achievements

1. **Python programming**
   Core syntax, logic and problem solving

2. **Web application structure**
   How pages, servers and data connect

3. **Frontend ↔ backend communication**
   Requests, responses and forms

4. **Data storage and practices**
   Databases, version control, clean code

Python Fundamentals

ILLUSTRATIVE ONLY

Representative learning topics

- Variables and data types
- Conditions (if / else)
- Loops (for)
- Functions
- Collections (dict, list)
- Exception handling (try / except)

Python: personally remembered. Example code: illustrative.

```
def check_results(marks):          # function
    results = {}                     # dict
    for name, score in marks.items():  # loop
        if score >= 40:              # condition
            results[name] = "Pass"
        else:
            results[name] = "Fail"
    return results

try:                                 # exceptions
    print(check_results({"A": 72, "B": 35}))
except Exception as e:
    print("Error:", e)
```

Full-Stack Architecture

GENERAL CONCEPT

Frontend examples
HTML, CSS, JavaScript

Backend examples
Python; framework such as Django

Database examples
SQL (e.g. SQLite, MySQL)

Examples only. Which of these my cohort covered is unconfirmed.

Possible Training Modules

PROVISIONAL

Provisional curriculum reconstruction. Exact cohort modules not recovered.

Python
Core programming
Coverage unconfirmed

HTML / CSS
Page structure and style
Coverage unconfirmed

JavaScript / jQuery
Browser interactivity
Coverage unconfirmed

Django
Python web framework
Coverage unconfirmed

SQL / Databases
Storing and querying data
Coverage unconfirmed

Git / GitHub
Version control
Coverage unconfirmed

Practical Exercises

ILLUSTRATIVE ONLY

Representative examples, not verified personal submissions

Python function

```
def square(n):
    return n * n

print(square(5))
```

Teaches: functions, parameters, return values

HTML form

```
<form method="post">
  <input name="task">
  <button>Add</button>
</form>
```

Teaches: collecting user input in the browser

Database query

```
SELECT name, marks
FROM students
WHERE marks >= 40;
```

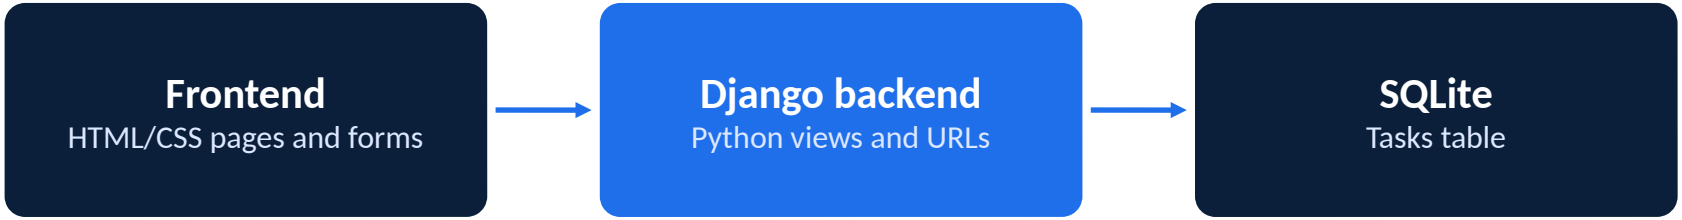

Teaches: filtering stored data with SQL

Illustrative Project Concept

ILLUSTRATIVE ONLY

Illustrative project concept: not verified as a project completed during my internship

Student Task Manager (concept)

Example features (CRUD)

Add	View	Update	Delete
a task	task list	mark done	remove task

Outcomes and Future Scope

Personally confirmed

- Completed the 8-week internship (certificate)
- Familiarity with Python (self-reported)

Targeted by training

- Frontend basics, Django, SQL, Git (provisional)
- Not claimed as mastered

Next steps

- Request module records from EduSkills support
- Practise Python and build small projects
- Learn Django, SQL and Git hands-on

Conclusion and Acknowledgement

- Python full-stack training builds end-to-end web development understanding
- Frontend, backend and database work together through requests and responses
- Future goals: hands-on Python, Django, SQL and Git projects

Thank you to EduSkills, IILM University, and the educators who supported this learning.

Thank You
